

Supply Chain Management Dashboard Project

Objective: The objective of this project is to create a comprehensive Supply Chain Management (SCM) Dashboard using Tableau. This dashboard will help monitor and optimize various aspects of the supply chain, including inventory levels, order fulfillment, supplier performance, transportation efficiency, and overall supply chain costs.

Columns Provided :

Product Type	Stock levels	Revenue generated	Lead time
SKU	Lead times	Customer demographics	Production volumes
Price	Order quantities	Shipping costs	Manufacturing lead time
Availability	Shipping times	Supplier name	Manufacturing costs
Number of products sold	Shipping carriers	Location	Inspection results
Defect rates	Transportation modes	Routes	Costs

Problem Statement :

- Supply chain data is often scattered across multiple sources, making it difficult for business stakeholders to track inventory levels, order fulfillment, supplier performance, and logistics efficiency in a single view
- There is a lack of real-time, visual insights to identify bottlenecks, reduce costs, and improve decision-making across the end-to-end supply chain process.
